Question 66

Which of the following is a valid bucket name

A. demo

B. Example

C. .example

D. demo.

Question 67

Which of the following is not a feature provided by Route53?

A. Registration of Domain Names

B. Routing of internet traffic to domain resources

C. Offloading content to cache locations

D. Health check of resources

Question 68

When working with API gateways in AWS , what is the type of endpoints that are exposed

A. HTTP

B. HTTPS

C. JSON

D. XML

Question 69

Which of the following verbs are supported with the API Gateway

A. GET

B. POST

C. PUT

D. All of the above

Question 70

Which of the following container technologies are currently supported by the AWS ECS service?

Choose 2 answers.

A. Kubernetes

B. Docker

C. Mesosphere

D. Canonical LXD

Question 71

Which of the following when used alongside with the AWS Secure Token service can be used to provide a single sign-on experience for existing users who are part of an organization using on-premise applications

A. OpenID Connect

B. JSON

C. SAML 2.0

D. OAuth

Question 72

While performing status checks on your volume in AWS , you can see that the volume check has a status of "insufficient-data". What can you derive from this status check

A. All checks have passed

B. A particular check has failed only

C. All checks have failed D. The check on the volume is still in progress.

Question 73

Which of the following can constitute the term of a 'Golden Image'

A. This is the basic AMI which is available in AWS.

B. This refers to an instance which has been bootstraped.

C. This refers to an AMI that has been constructed from a customized Image.

D. This refers to a special type of Linux AMI.

Question 74

When designing a health check for your web application which is hosted behind an elastic load balancer, which of the following health checks is ideal to implement

A. A TCP health check

B. A UDP health check

C. A HTTP health check

D. A combination of TCP and UDP health checks

Question 75

Which of the following is an example of synchronous replication which occurs in the AWS service?

A. AWS RDS Read Replica's for MySQL, MariaDB and PostgreSQL

B. AWS Multi-AZ RDS

C. Redis engine for Amazon ElastiCache replication

D. AWS RDS Read Replica's for Oracle

Question 76

You want to get the reason for your EC2 Instance termination from the CLI. Which of the below commands is ideal in getting the reason.

A. aws ec2 describe-instances

B. aws ec2 describe-images

C. aws ec2 get-console-screenshot

D. aws ec2 describe-volume-status

Question 77

An application is currently configured on an EC2 instance to process messages in SQS. The queue has been created with the default settings. The application is configured to just read the messages once a week. It has been noticed that not all the messages are being picked by the application. What could be the issue?

A. The application is configured to long polling, so some messages are not being picked up

B. The application is configured to short polling, so some messages are not being picked up

C. Some of the messages have surpassed the retention period defined for the queue

D. Some of the messages don't have the right permissions to be picked up by the application

Question 78

Your application is on an EC2 instance in AWS. Users use the application to upload a file to S3. The message first goes to an SQS queue , before it is picked up by a worker process, which fetches the object and uploads it to S3. An email is then sent on successful completion of the upload. You notice though that you are getting numerous emails for each request, when ideally you should be getting only one final email notification for each successful upload. Which of the below could be the possible reasons for this.

A. The application is configured for long polling so the messages are being picked up multiple times.

B. The application is not deleting the messages from SQS.

C. The application is configured to short polling, so some messages are not being picked up

D. The application is not reading the message properly from the SQS queue.

Question 79

You have created your own VPC and subnet in AWS. You have launched an instance in that subnet. You have noticed that the instance is not receiving a DNS name. Which of the below options could be a valid reason for this issue.

A. The CIDR block for the VPC is invalid

B. The CIDR block for the subnet is invalid

C. The VPC configuration needs to be changed.

D. The subnet configuration needs to be changed.

Question 80

You have created your own VPC and subnet in AWS. You have launched an instance in that subnet. You have attached an internet gateway to the VPC and seen that the instance has a public IP. The Route table is 10.0.0.0/16. The instance still cannot be reached from the Internet. Which of the below changes need to be made to the route table to ensure that the issue can be resolved.

A. Add the following entry to the route table – 0.0.0.0/0->Internet Gateway

B. Modify the above route table – 10.0.0.0/16 ->Internet Gateway

C. Add the following entry to the route table – 10.0.0.0/16 ->Internet Gateway

D. Add the following entry to the route table - 0.0.0.0/16->Internet Gateway

Question 81

You wanted to have a VPC created in AWS which will host an application. The application will just consist of web and database servers. The application just requires to be accessed from the internet by internet users. Which of the following VPC configuration wizards options would you use

A. VPC with a Single Public Subnet Only

B. VPC with Public and Private Subnets

C. VPC with Public and Private Subnets and Hardware VPN Access

D. VPC with a Private Subnet Only and Hardware VPN Access

Question 83

You are designing various CloudFormation templates, each template to be used for a different purpose. What determines the cost of using the CloudFormation templates?

A. CloudFormation does not have a cost itself.

B. You are charged based on the size of the template.

C. You are charged based on the time it takes to launch the template.

D. It has a basic charge of $1.10

Question 84

You are creating a number of EBS Volumes for your EC2 instances. You are concerned on the backups of the EBS Volumes. Which of the below is a way to backup the EBS Volumes

A. Configure Amazon Storage Gateway with EBS volumes as the data source and store the backups on premise through the storage gateway

B. Write a cronjob that uses the AWS CLI to take a snapshot of production EBS volumes.

C. Use a lifecycle policy to back up EBS volumes stored on Amazon S3 for durability

D. Write a cronjob on the server that compresses the data and then copy it to Glacier

Question 85

You have a set of IIS Servers running on EC2 instances for a high traffic web site. You want to collect and process the log files generated from the IIS Servers. Which of the below services is ideal to run in this scenario

A. Amazon S3 for storing the log files and Amazon EMR for processing the log files

B. Amazon S3 for storing the log files and EC2 Instances for processing the log files

C. Amazon EC2 for storing and processing the log files

D. Amazon DynamoDB to store the logs and EC2 for running custom log analysis scripts

Question 86

You are trying to configure Cross Region Replication for your S3 bucket. But you are not able to select the option of Cross Region Replication and is disabled. Which of the below could be the possible reasons for this ?

A. The feature is not available in that region

B. You need to enable versioning on the bucket

C. The source region is currently down

D. The destination region is currently down

Question 87

What is the amount of temp space is allocated to you when using Lambda functions per invocation.

A. 256 MB

B. 512 MB

C. 2 GiB

D. 16 GiB

Question 88

You have a requirement to create a subnet in an AWS VPC which will host around 20 hosts. This subnet will be used to host web servers. Which of the below could be the possible CIDR block allocated for the subnet

A. 10.0.1.0/27

B. 10.0.1.0/28

C. 10.0.1.0/29

D. 10.0.1.0/30

Question 89

You run a website which hosts videos and you have two types of members, premium fee paying members and free members. All videos uploaded by both your premium members and free members are processed by a fleet of EC2 instances which will poll SQS as videos are uploaded. However you need to ensure that your premium fee paying members' videos have a higher priority than your free members. How do you design SQS?

A. SQS allows you to set priorities on individual items within the queue, so simply set the fee paying members at a higher priority than your free members.

B. Create two SQS queues, one for premium members and one for free members. Program your EC2 fleet to poll the premium queue first and if empty, to then poll your free members SQS queue.

C. SQS would not be suitable for this scenario. It would be much better to use SNS to encode the videos.

D. Use SNS to notify when a premium member has uploaded a video and then process that video accordingly.

Question 90

In a VPC, you have launched two web servers and attached to an internet facing ELB. Both your web servers and ELB are located in the public subnet. Yet, you are still not able to access your web application via the ELB's DNS through the internet. What could be done to resolve this issue?

A. Attach an Internet gateway to the VPC and route it to the subnet

B. Add an elastic IP address to the instance

C. Use Amazon Elastic Load Balancer to serve requests to your instances located in the internal subnet

D. Recreate the instances again

Question 91

You want to ensure that you keep a check on the Active Volumes , Active snapshots and Elastic IP addresses you use so that you don't go beyond the service limit. Which of the below services can help in this regard?

A. AWS Cloudwatch

B. AWS EC2

C. AWS Trusted Advisor

D. AWS SNS

Question 92

You are building an automated transcription service in which Amazon EC2 worker instances process an uploaded audio file and generate a text file. You must store both of these files in the same durable storage until the text file is retrieved. You do not know what the storage capacity requirements are. Which storage option is both cost-efficient and scalable?

A. Multiple Amazon EBS volume with snapshots

B. A single Amazon Glacier vault

C. A single Amazon S3 bucket

D. Multiple instance stores

Question 93

You are an AWS Administrator for your company. The company currently has a set of AWS resources hosted in a particular region. You have been requested by your supervisor to create a script which could create duplicate resources in another region incase of a disaster. Which of the below AWS services could help fulfil this requirement.

A. AWS Elastic Beanstalk

B. AWS SQS

C. AWS Cloudformation

D. AWS SNS

Question 94

What are bastion hosts?

A. They are instances in the public subnet which are used as a jump server to resources within other subnets.

B. They are instances in the private subnet which are used as a jump server to resources within other subnets.

C. They are instances in the public subnet which are used to host web resources that can be accessed by users.

D. They are instances in the private subnet which are used to host web resources that can be accessed by users.

Question 95

You have several AWS reserved instances in your account. They have been running for some time, but now need to be shutdown since they are no longer required. The data is still required for future purposes. Which of the below possible 2 steps can be taken.

A. Convert the instance to on-demand instances

B. Sell the instances on the AWS Reserved Instance Marketplace

C. Take snapshots of the EBS volumes and terminate the instances

D. Convert the instance to spot instances

Question 96

You have an EC2 Instance in a particular region. This EC2 Instance has a preconfigured software running on it. You have been requested to create a disaster recovery solution in case the instance in the region fails. Which of the following is the best solution.

A. Create a duplicate EC2 Instance in another AZ. Keep it in the shutdown state. When required, bring it back up.

B. Backup the EBS data volume. If the instance fails, bring up a new EC2 instance and attach the volume.

C. Store the EC2 data on S3. If the instance fails, bring up a new EC2 instance and restore the data from S3.

D. Create an AMI of the EC2 Instance and copy it to another region

Question 97

You have an EC2 instance located in a subnet in AWS. You have installed a web application on this instance. The security group attached to this instance is 0.0.0.0/0. The VPC has 10.0.0.0/16 attached to it. You can SSH into the instance from the internet, but you are not able to access the web server via the web browser. Which of the below steps would resolve the issue?

A. Add an HTTP rule to the Security Group

B. Remove the SSH rule from the security group

C. Add the route 10.0.0.0/16 -> igw-a9 7272cc to the Route Table

D. Add the route 0.0.0.0/0 -> local to the Route Table

Question 98

You working in the media industry and you have created a web application where users will be able to upload photos they create to your website. This web application must be able to call the S3 API in order to be able to function. Where should you store your API credentials whilst maintaining the maximum level of security.

A. Save the API credentials to your php files.

B. Don't save your API credentials. Instead create a role in IAM and assign this role to an EC2 instance when you first create it.

C. Save your API credentials in a public Github repository.

D. Pass API credentials to the instance using instance userdata.

Question 99

You are a systems administrator and you need to monitor the health of your production environment. You decide to do this using Cloud Watch, however you notice that you cannot see the health of every important metric in the default dash board. Which of the following metrics do you need to design a custom cloud watch metric for, when monitoring the health of your EC2 instances?

A. CPU Usage

B. Memory usage

C. Disk read operations

D. Network in

Question 100

In order for an EC2 instance to be accessed from the internet, which of the following are required. Choose 3 answers from the options given below

A. An Internet gateway attached to the VPC

B. A private IP address attached to the instance

C. A public IP address attached to the instance

D. A route entry to the Internet gateway in the Route table

Question 101

You are IOT sensors to monitor the number of bags that are handled at an airport. The data gets sent back to a Kinesis stream with default settings. Every alternate day, the data from the stream is sent to S3 for processing. But you notice that S3 is not receiving all of the data that is being sent to the Kinesis stream. What could be the reason for this?

A. The sensors probably stopped working on some days hence data is not sent to the stream.

B. S3 can only store data for a day

C. Data records are only accessible for a default of 24 hours from the time they are added to a stream

D. Kinesis streams are not meant to handle IoT related data

Question 102

You are defined the following Network ACL for your subnet: Rule:100-ALL TRAFFIC-ALL PROTOCOL-ALL PORTS-Source-0.0.0.0/0-ALLOW, Rule 101-Custom TCP Rule-TCP(6) PROTOCOL-3000 PORT-Source:54.12.34.34/32-DENY & Rule * -ALL TRAFFIC-ALL PROTOCOL-ALL PORTS-Source:0.0.0.0/0-DENY. What will be the outcome when a workstation of IP 54.12.34.34 tries to access your subnet

A. The request will be allowed

B. The request will be denied

C. The request will be allowed initially and then denied

D. The request will be denied initially and then allowed

Question 103

You are a solutions architect working for a company. They store their data on S3, however recently an someone accidentally deleted some critical files in S3. You've been asked to prevent this from happening in the future. What options below can prevent this?

A. Make sure you provide signed URL's to all users.

B. Enable S3 versioning and Multifactor Authentication (MFA) on the bucket.

C. Use S3 Infrequently Accessed storage to store the data on.

D. Create an IAM bucket policy that disables deletes.

Question 104

You run an automobile reselling company that has a popular online store on AWS. The application sits behind an Auto Scaling group and requires new instances of the Auto Scaling group to identify their public and private IP addresses. How can you achieve this?

A. By using Ipconfig for windows or Ifconfig for Linux.

B. By using a cloud watch metric.

C. Using a Curl or Get Command to get the latest meta-data from http://169.254.169.254/latest/meta-data/

D. Using a Curl or Get Command to get the latest user-data from http://169.254.169.254/latest/user-data/

Question 105

You are the solution architect for a company. The company has a requirement to deploy an application which will need to have session management in place. Which of the following services can be used to store session data for session management?

A. AWS Storage Gateway, Elasticache & ELB

B. ELB, Elasticache & RDS

C. Cloudwatch, RDS & DynamoDb

D. RDS, DynamoDB & Elasticache.

Question 106

You are working for an Enterprise and have been asked to get a support plan in place from AWS.

1) 24x7 access to support.

2) Access to the full set of Trusted Advisor checks. Which of the following would meet these requirements ensuring that cost is kept at a minimum

A. Basic

B. Developer

C. Business

D. Enterprise

Question 107

Which of the following is incorrect with regards to Private IP addresses?

A. In Amazon EC2 classic, the private IP addresses are only returned to Amazon EC2 when the instance is stopped or terminated

B. In Amazon VPC, an instance retains its private IP addresses when the instance is stopped.

C. In Amazon VPC, an instance does NOT retain its private IP addresses when the instance is stopped.

D. In Amazon EC2 classic, the private IP address is associated exclusively with the instance for its lifetime

Question 108

Which of the following are best practices for monitoring your EC2 Instances

A. Create and implement a monitoring plan that collects monitoring data from all of the parts in your AWS solution

B. Automate monitoring tasks as much as possible

C. Check the log files on your EC2 instances

D. All of the above

Question 109

You work for a major news network in Europe. They have just released a new app which allows users to report on events as and when they happen using their mobile phone. Users are able to upload pictures from the app and then other users will be able to view these pics. Your organization expects this app to grow very quickly, essentially doubling its user base every month. The app uses S3 to store the media and you are expecting sudden and large increases in traffic to S3 when a major news event takes place as people will be uploading content in huge numbers). You need to keep your storage costs to a minimum however and it does not matter if some objects are lost. Which storage media should you use to keep costs as low as possible?

A. S3 – Infrequently Accessed Storage.

B. S3 – Reduced Redundancy Storage (RRS).

C. Glacier.

D. S3 – Provisioned IOPS.

Question 110

Amazon EC2 provides a repository of public data sets that can be seamlessly integrated into AWS cloud-based applications. What is the monthly charge for using the public data sets?

A. 1 time charge of 1$ for all the datasets.

B. 1$ per dataset per month

C. 10 $ per month for all datasets

D. There is no charge for using public data sets

Question 111

In VPCs with private and public subnets, database servers should ideally be launched into:

A. The public subnet

B. The private subnet

C. Either of them

D. Not recommended, they should ideally be launched outside VPC

Question 112

You have written a CloudFormation template that creates 1 elastic load balancer fronting 2 EC2 instances. Which section of the template should you edit so that the DNS of the load balancer is returned upon creation of the stack?

A. Resources

B. Parameters

C. Outputs

D. Mappings

Question 113

Is it true that EBS can always tolerate an Availability Zone failure?

A. No, all EBS volume is stored in a single Availability Zone

B. Yes, EBS volume has multiple copies so it should be fine

C. Depends on how it is setup

D. Depends on the Region where EBS volume is initiated

Question 114

Which of the following benefits does adding Multi-AZ deployment in RDS provide? Choose 2 answers from the options given below

A. MultiAZ deployed database can tolerate an Availability Zone failure

B. Decrease latencies if app servers accessing database are in multiple Availability zones

C. Make database access times faster for all app servers

D. Make database more available during maintenance tasks

Question 115

A company has the following EC2 instance configuration. They are trying to connect to the instance from the internet. They have verified the existence of the Internet gateway and the route tables are in place. What could be the issue?

A. It's launched in the wrong Availability Zone

B. The AMI used to launch the instance cannot be accessed from the internet

C. The private IP is wrongly assigned

D. There is no Elastic IP Assigned

Question 116

What is the basic requirement to login into an EC2 instance on the AWS cloud?

A. Volumes

B. AMI's

C. Key Pairs

D. S3

Question 117

Which of the below features allows you to take backups of your EBS volumes? Choose one answer from the options given below.

A. Volumes

B. State Manager

C. Placement Groups

D. Snapshots

Question 118

A company wants to host a selection of MongoDB instances. They are expecting a high load and want to have as low latency as possible. Which class of instances from the below list should they choose from.

A. T2

B. I2

C. T1

D. G2

Question 119

Which of the below elements can you manage in the IAM dashboard? Choose 3 answers from the options given below

A. Users

B. Encryption Keys

C. Cost Allocation Reports

D. Policies

Question 120

What are the languages currently supported by AWS Lamda? Choose 3 answers from the options given below

A. Node.js

B. Angular JS

C. Java

D. Python

Question 121

A photo-sharing service stores pictures in Amazon Simple Storage Service (S3) and allows application sign-in using an OpenID Connect-compatible identity provider. Which AWS Security Token Service approach to temporary access should you use for the Amazon S3 operations?

A. SAML-based Identity Federation

B. Cross-Account Access

C. AWS Identity and Access Management roles

D. Web Identity Federation

Question 122

In Cloudtrail, where does it store all of the logs that it creates? Choose one answer from the options given below.

A. A separate EC2 instance with EBS storage

B. A RDS instance

C. A DynamoDB instance

D. Amazon S3

Question 123

In the event of an unplanned outage of your primary DB, AWS RDS automatically switches over to the secondary. In such a case which record in Route 53 is changed? Select one answer from the options given below

A. DNAME

B. CNAME

C. TXT

D. MX

Question 124

Which of the below resources cannot be tagged in AWS

A. Images

B. EBS Volumes

C. VPC endpoint

D. VPC

Question 125

What type of monitoring for EBS volumes is available automatically in 5 minute periods at no charge?

A. Basic

B. Primary

C. Detailed

D. Local

Question 126

There is a company website that is going to be launched in the coming weeks. There is a probability that the traffic will be quite high in the first couple of weeks. In the event of a load failure, how can you set up DNS failover to a static website? Choose the correct answer from the options given below.

A. Duplicate the exact application architecture in another region and configure DNS weight-based routing

B. Enable failover to an on-premise data center to the application hosted there.

C. Use Route 53 with the failover option to failover to a static S3 website bucket or CloudFront distribution.

D. Add more servers in case the application fails.

Question 127

What is one of the major advantages of having a VPN in AWS?

A. You don't have to worry about security, this is managed by AWS.

B. You can connect your cloud resources to on-premise data centers using VPN connections

C. You can provision unlimited number of S3 resources.

D. None of the above

Question 128

One of your instances is reporting an unhealthy system status check. However, this is not something you should have to monitor and repair on your own. How might you automate the repair of the system status check failure in an AWS environment?

Choose the correct answer from the options given below

A. Create CloudWatch alarms that stop and start the instance based off of status check alarms

B. Write a script that queries the EC2 API for each instance status check

C. Write a script that periodically shuts down and starts instances based on certain stats.

D. Implement a third party monitoring tool.

Question 129

A company is running three production web server reserved EC2 instances with EBS-backed root volumes. These instances have a consistent CPU load of 80%. Traffic is being distributed to these instances by an Elastic Load Balancer. They also have production and development Multi-AZ RDS MySQL databases. What recommendation would you make to reduce cost in this environment without affecting availability of mission-critical systems? Choose the correct answer from the options given below

A. Consider using on-demand instances instead of reserved EC2 instances

B. Consider not using a Multi-AZ RDS deployment for the development database

C. Consider using spot instances instead of reserved EC2 instances

D. Consider removing the Elastic Load Balancer

Question 130

A company has assigned two web server instances in a VPC subnet to an Elastic Load Balancer (ELB). However, the instances and the ELB are not reachable via URL to the Elastic Load Balancer (ELB). How can you resolve the issue so that your web server instances can start serving the web app data to the public Internet? Choose the correct answer from the options given below

A. Attach an Internet gateway to the VPC and route it to the subnet

B. Add an elastic IP address to the instance

C. Use Amazon Elastic Load Balancer to serve requests to your instances located in the internal subnet

D. None of the above
